B

Hartford, Conn.
October 16, 1944

Mr. Robert J. Ross, City Engineer
Municipal Building
Hartford, Conn.

Dear Mr. Ross:

On September 30 you wrote to this office inquiring about the plans showing the method of construction of the pipe railing on retaining wall at Windsor Street underpass.

We have searched through all of our records on all of our plans and we are unable to find any details of how these posts were set. It would seem from their having been forced vertically that they had been set in some sort of a sleeve into which water had leaked and frozen and had heaved the posts.

It is possible that the Railroad Company might be able to furnish you with further information about these posts as I believe they prepared the plans for this structure.

Yours truly,

W. J. Cox
State Highway Commissioner
